

# STAR Classic Early Model Years Maintenance Manual Index

## Introduction

I made these files to make it easier to navigate around your Mercedes-Benz CD STAR Classic Service Manual Library, Volume 1 thru 4.

I would appreciate any and all feedback, concerning any bugs, bad links, bad formatting, bad grammar or spelling, anything else you find that you are not expecting, or anything you expected to find, but did not! Please help us make it better. All suggestions welcomed.

## Donationware

Clearly, this is a labor of passion (some would say an obsession). But it is fed in part by the sense of community I have received from belonging to several online Lists and Forums dedicated to these fine automobiles that we drive. PLEASE SUPPORT YOUR FAVORITE FORUM WITH A DONATION.

## Revision History

Version 1.0

Integrated CD into the Service Library Index.

These Early Model Years CDs are completely different from the other model CDs and will take a bit of additional thinking to get them to work like the other models, if at all possible.

## How to Use

These files are very simple to install. You won't have to move and rearrange any of the files on the CDs; you just copy your two CDs to your HD and leave them as is. Add my one file and one folder and that's it. Takes about two minutes to setup. Because no PDF files are moved, you can continue to use the MB indexing system at the same time, if you want.

Note: These index files were set up using the Mercedes-Benz Service Manual disks. If you don't have the MB Service Library CDs, they are available from various places, including MBUSA, 1-800-FOR-MERCEDES.

NOTE to PC users: MS Internet Explorer has a bug that does not allow the proper display of certain PDF files. We STRONGLY suggest that you use Netscape or Mozilla for proper display.

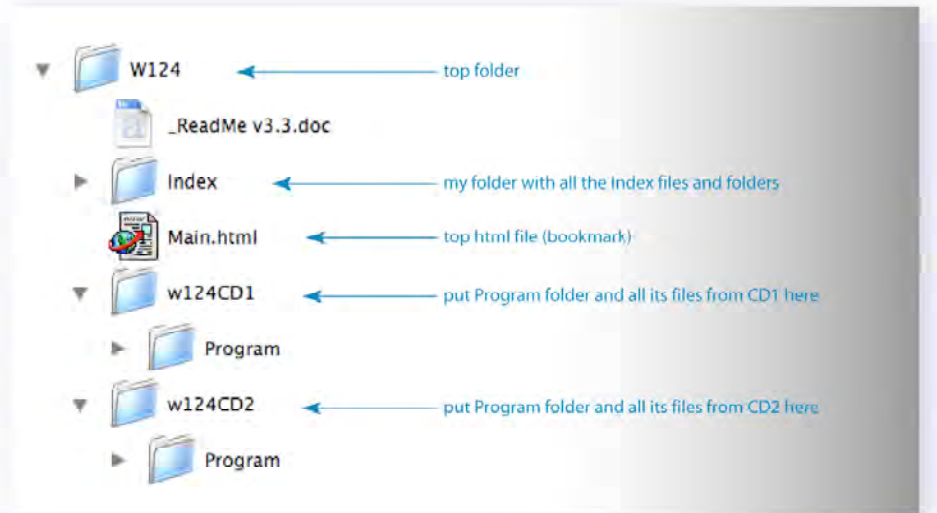

## Installation Instructions

It's pretty simple. Here is all you do:

1. Expand the file, EMYvolX.zip.  
It will uncompress into a folder named "EMYvolX". Inside of "EMYvolX" will be my main index file, named "Main.html" and a folder named "Index" which contains all of the rest of my stuff. Also in "EMYvolX" are two empty folders named "EMYvolXCD1" and "EMYvolXCD2". (Note: X represents Vol 1, 2, 3 or 4. Also Vol 1 only has one CD)
2. Insert your CD disk 1 into your computer.  
From your CD disk 1, drag all of the folders in CD 1 into the "EMYvolXCD1" on your hard drive..
3. After all the files have copied, Eject CD disk 1.
4. Insert your CD disk 2 into your computer.  
From your CD disk 2, drag all of the folders in CD 2 into the "EMYvolXCD2" on your hard drive.
5. After all files have copied, Eject CD disk 2.

6. Move the "EMYvolX" folder to wherever you want on your HD.  
This could be your Documents folder, for example. Or into your "Service" folder. Don't move any files around inside the EMYvolX folder unless you know what you are doing. You could break links.

That's all that there is to it. So now the set up should be similar to this (this is a copy of the W124 structure; the EMYvolX folder is similar, except that there are additional folders in the EMYvolXCD1 and EMYvolXCD2 folders.

To run, just open the "Main.html" file in your browser. You can bookmark this page as your starting point.

So now, with this, you can use my index system OR the MB html/flash files.

Please let me know if you are having trouble making it work. I hope that you all find the index an improvement to the CD experience and I also hope that you will let me know if/when you get it to work. Also, if you have any questions or suggestions for improvement, please let me know – constructive criticism is welcome and will never hurt my feelings! ;-)

Regards,

Steve Nervig  
Seattle
